

CLAIMS

Therefore, having thus described the invention, at least the following is claimed:

- 1 1. An anterior cervical corpectomy plate, comprising:
 - 2 fixing means for fixing the plate to a portion of a cervical spine; and
 - 3 adjusting means for adjusting a length of the plate.
- 1 2. An anterior cervical corpectomy plate, comprising:
 - 2 a fixing member for fixing the plate to a portion of a cervical spine; and
 - 3 an adjustable member for adjusting a length of the plate.
- 1 3. An anterior cervical corpectomy plate, comprising:
 - 2 a first plate member having a first mount and a first support member extending from said first mount;
 - 3 a second plate member having a second mount and a second support member extending from said second mount;
 - 4 wherein said first mount and said second mount are adapted to each engage a vertebral body and said first support member and said second support member are adapted to engage each other in an axially adjustable manner.

- 1 4. An anterior cervical corpectomy plate, comprising:
 - 2 a first plate member having a first mount and a first support member
 - 3 extending from said first mount;
 - 4 a second plate member having a second mount and a second support
 - 5 member extending from said second mount;
 - 6 a plurality of apertures disposed in said first mount and said second
 - 7 mount;
 - 8 a plurality of screws adapted to engage said plurality of apertures, said
 - 9 screws being adapted to fix said first mount and said second mount each to a
 - 10 vertebral body;
 - 11 a stop disposed on at least one of said first plate member and said second
 - 12 plate member;
 - 13 wherein said first support member and said second support member are
 - 14 adapted to engage each other in an axially adjustable manner and said stop is
 - 15 adapted to limit such axial adjustment.
